There are also independent cities which are within particular states but not part of any particular county or consolidated city-counties. Another type of organization is where the city and county are unified and function as an independent city. There are thirty-nine independent cities in Virginia and other independent cities or city-counties are San Francisco, California, Baltimore, Maryland, St. Louis, Missouri, Denver, Colorado and Carson City, Nevada. Counties can include a number of cities, towns, villages, or hamlets, or sometimes just a part of a city. Counties have varying degrees of political and legal significance, but they are always administrative divisions of the state. Counties in many states are further subdivided into townships, which, by definition, are administrative divisions of a county. In some states, such as Michigan, a township can file a charter with the state government, making itself into a "charter township", which is a type of mixed municipal and township status (giving the township some of the rights of a city without all of the responsibilities), much in the way a metropolitan municipality is a mixed municipality and county.

purpose of sequencing	Cluster/Outbreak investigation	GENEPIO:0100019	A sampling strategy in which individuals are chosen for investigation into a disease cluster or outbreak.	The terms cluster and outbreak both describe the occurrence of new disease cases within a particular location and time period. The number of cases within a cluster are not necessarily greater than what is expected, however in an outbreak the number of cases does exceed the usual norm. In an outbreak the cases are confirmed to be epidemiologically linked while in a cluster an epidemiological connection is only suspected. Not all clusters are outbreaks, however each cluster needs to be investigated. [Source: https://covid19evidencereviews.saskhealthauthority.ca/en/permalink/coviddoc153]

vaccination dose vaccine i						
vaccination dose vaccine na	Astrazeneca (Vaxzevria)	GENEPIO:0100308	A vaccine composed of a replication-deficient chimpanzee adenovirus, ChAdOx1, encoding the severe acute respiratory syndrome coronavirus-2 (SARS-CoV-2) spike glycoprotein (SP), with potential immunomodulating and anti-viral activities. Upon administration, ChAdOx1 nCoV-19 expresses the SARS-CoV-2 SP, which induces a humoral and cell-mediated immune response against SARS-CoV-2. This may prevent SARS-CoV-2 infection and inhibit viral replication. SP, usually found on the surface of SARS-CoV-2, plays an essential role in the infection pathway of the SARS-CoV-2 virus. [NCI]

	vaccination dose vaccine na Johnson & Johnson (Janssen)	GENEPIO:0100307	A coronavirus vaccine composed of a genetically engineered, replication-incompetent, adenovirus serotype 26 (Ad26) vector expressing the stabilized pre-fusion spike (S) protein of the severe acute respiratory syndrome coronavirus-2 (SARS-CoV-2), with potential immunomodulating and anti-COVID-19 activities. Upon intramuscular administration of the COVID-19 vaccine Ad26.COV2.S, the Ad26 infects human cells, which produces SARS-CoV-2 S protein. The released S protein activates the immune system to induce a humoral and cell-mediated immune response against SARS-CoV-2. This may prevent SARS-CoV-2 infection and inhibit viral replication. S protein, usually found on the surface of SARS-CoV-2, plays an essential role in the infection pathway of the SARS-CoV-2 virus. [NCI]			
	vaccination dose vaccine na Moderna (Spikevax)	GENEPIO:0100304	A vaccine consisting of a lipid nanoparticle (LNP) encapsulating a messenger RNA (mRNA) encoding the full-length, prefusion stabilized spike (S) protein of SARS-CoV-2, with potential immunizing activity against SARS-CoV-2. Upon administration of elasomeran, the lipid nanoparticle binds to the plasma membrane of cells and releases the mRNA into the cells. The mRNA is then translated by ribosomes to produce the SARS-CoV-2 S protein. This may activate both humoral and cellular immune responses which may result in protection against SARS-CoV-2 infection. [NCI]			
	vaccination dose vaccine na Pfizer-BioNTech (Comirnaty)	GENEPIO:0100305	A vaccine consisting of lipid nanoparticle (LNP) encapsulating a nucleoside modified messenger RNA (modRNA) encoding an optimized form of the full-length severe acute respiratory syndrome coronavirus-2 (SARS-CoV-2) spike glycoprotein (SP), with potential immunizing and anti-COVID-19 activities. Upon injection of tozinameran, the LNPs bind to the plasma membrane of nearby cells and release SARS-CoV-2 SP mRNA into the cell. The mRNA is then translated by the cellular protein translation machinery to produce SARS-CoV-2 SP. This may stimulate the immune system to induce an antibody and T-cell-mediated immune response. This may provide active immunization against SARS-CoV-2 infection. SP, usually found on the surface of SARS-CoV-2, plays an essential role in the infection pathway of the SARS-CoV-2 virus. [NCI]			
	vaccination dose vaccine na Pfizer-BioNTech (Comirnaty Pediatric)	GENEPIO:0100306	A Comirnaty vaccine formulated for use in children ages 5 to 11 years old, intended to provide active immunization against SARS-CoV-2 infection.
